

Managed Phishing Services

Improve your human firewall and reduce security risks with outsourced phishing awareness and training

Phishing is at an all-time high, with the first three months of 2022 seeing more than one million total attacks. – APWG 1Q Trends Report.

Malicious activity is also rising in sophistication too, with attacks becoming more difficult to stop, especially for the untrained eye.

Even with the best cyber protection in place you can't stop everything. So effective training of your employees, 'your Human Firewall', can play a crucial role in avoiding security breaches.

Delivering annual or ad-hoc phishing training has proven to be an ineffective method for teaching users. Businesses require rich security awareness programs that provide believable phishing simulations and continuous reporting and improvement.

Your challenges:

- IT teams don't have experience to simulate phishing training in-house
- No time to build and manage in-house security awareness programs
- Security awareness seen as a 'tick box' exercise
- Security training is dry and unengaging for users

Managed Phishing can help:

- Always-on phishing training delivered by experts
- Best-in-class phishing tools and training programs
- Pro-active training programs and recommendations for improvement
- Reduce risks from human error and create a 'human firewall'
- Strengthen your email security with recommendations from our SOC
- Demonstrate compliance

Kocho Managed Phishing Service

Kocho's Managed Phishing Service is designed to help you evaluate user awareness of phishing techniques and expose your employees to existing phishing emails, including in-depth reporting to highlight risky behaviour.

We actively train your employees on how to successfully spot phishing attacks targeted at business email.

By taking a cyclical, all-encompassing approach based on 'train, phish, analyse' our simulated phishing tests ensure the whole organisation is on-guard.

Train:

- Access to the world's largest library of security awareness content.
- Interactive modules, videos and games.
- Automated training campaigns and scheduled reminder emails.

Phish:

- No one is excluded from phishing training (including IT).
- Phishing simulations evolve in sophistication over time and are based on up to date threats we see in our next generation SOC.
- All staff are evaluated in the same manner.

Analyse:

- Comprehensive package of reports and dashboards.
- Recommendations on how to harden your email security.
- Insights for executives to improve training ROI.
- Track your progress and stay compliant.

39% of businesses report identifying a cyber attack.

83% of attacks reported came from Phishing.
