

Practical Application of GenAI in the Workplace

Accelerate successful deployment of GenAI in your business. Build your business case, avoid common deployment pitfalls, and future-proof your data security processes.

Generative (GenAI) has the potential to transform the way we all work.

Many businesses are turning to GenAI to unlock greater productivity and opportunities for growth.

A recent Microsoft study of 31,000 people unveiled some key benefits that they thought would help to hyper-scale their productivity, including:

- Outsourcing mundane/repetitive tasks
- Reducing the time spent searching for information
- Writing 'first drafts' of documents or reports
- Cutting down information overload on email/teams
- Cutting down and/or summarising meetings

Organisations are already tapping into game-changing competitive advantages from improved productivity, plus time and cost savings, through GenAI.

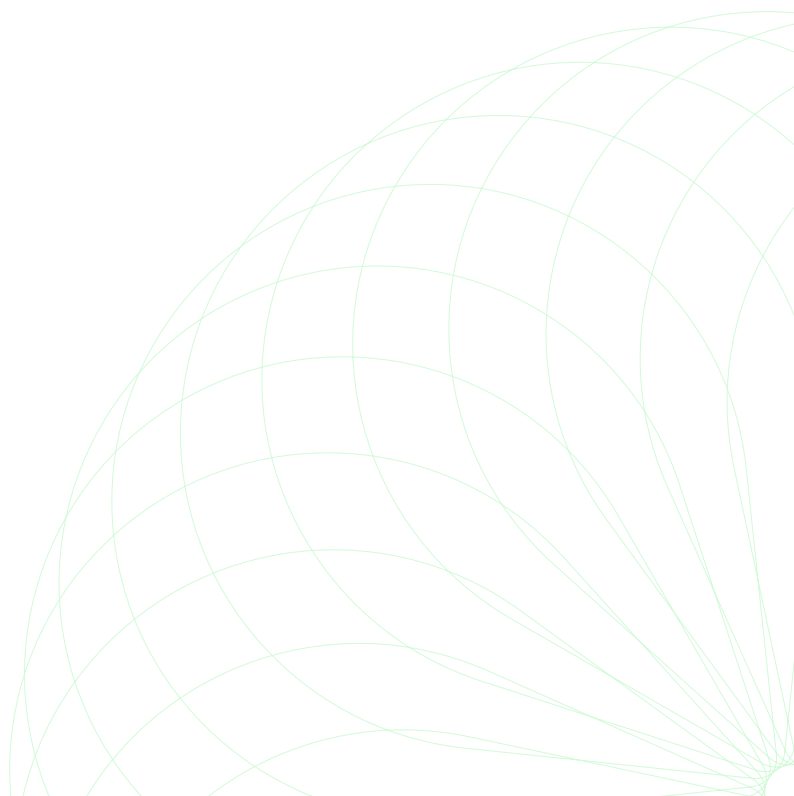

But for GenAI to work effectively in your organisation, you need to deploy it in the right way.

It's important to remember that, as with all new technology, the correct design architecture, secure and compliant processes, and user adoption and training, are critical to successful deployment and long-term value creation.

It's not as simple as 'turning on Copilot and away you go'

A Kocho GenAI vision call will help you accelerate the successful deployment of GenAI in your business.

We'll help you develop the business case, understand data compliance and access governance issues, and realise the importance of user training and adoption.

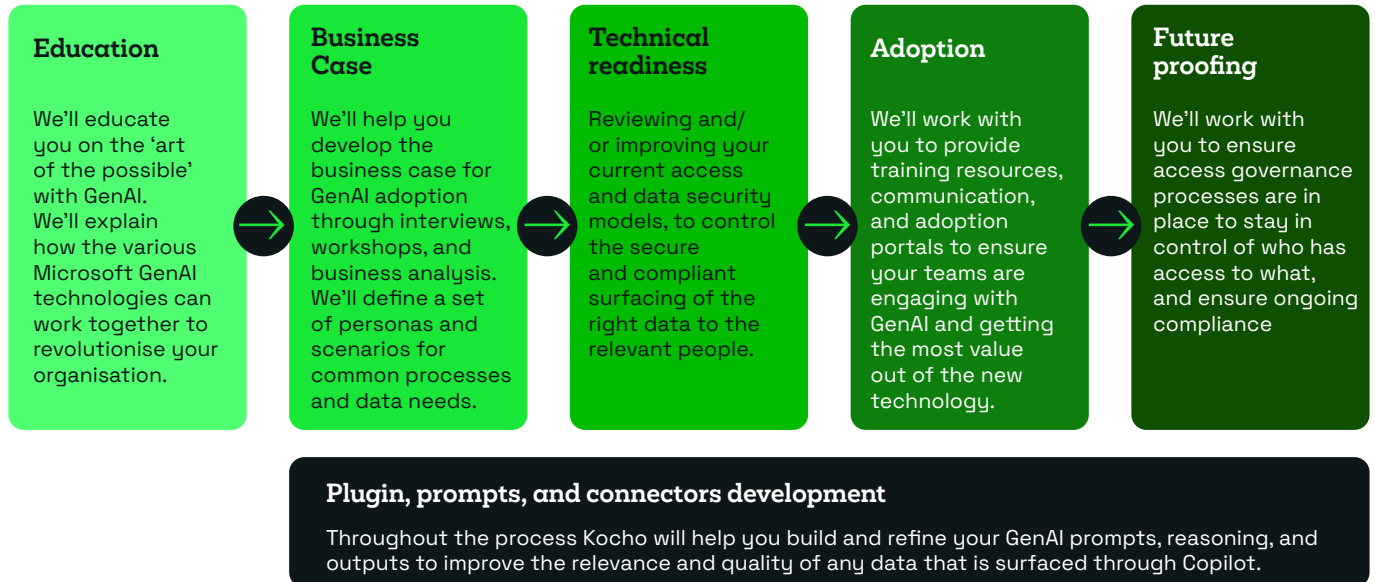

At Kocho we see two main scenarios where we can assist you with harnessing GenAI technology.

ONE

Microsoft Copilot readiness and optimisation

Our business consultants will collaborate with your senior stakeholders in a step-by-step approach to realising value from Copilot.

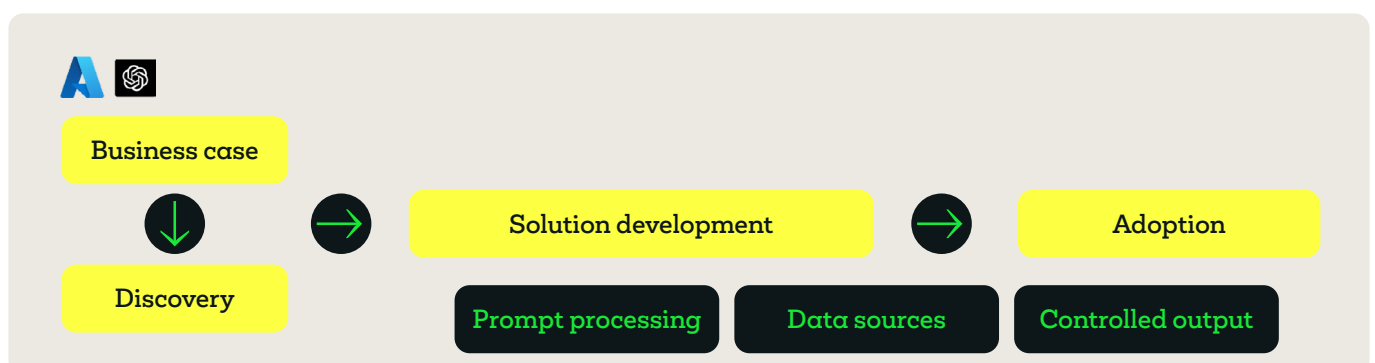

TWO

Azure Open GenAI Custom Solutions

Certain organisations may require a more custom GenAI solution on top of what Copilot can offer. This could be for a number of reasons, including:

- Organisations dealing with highly sensitive data, requiring a higher level of control.
- Businesses with a strong desire for GenAI, but with a lack of internal control around user access and data (i.e. the need to ringfence and serve only controlled sets of data to specific people).
- The need to surface data from bespoke/homegrown applications into your GenAI environment.
- A need to expose GenAI to a wider audience or access public data sources.
- Organisations requiring greater assurance that GenAI data sets (answers) are controlled, and responses and data surfaced will remain consistent over time.

For a custom GenAI solution, Kocho can take you through a number of steps in order to deliver a successful GenAI deployment.

Interested in discovering how GenAI can revolutionise your business?

Talk to a friendly member of our team today and set up a 30-minute session with one of our GenAI technology experts.

About Kocho

At Kocho, we believe greatness lies in everyone.

That's why we exist, to help companies realise their potential.

By combining the power of Microsoft cloud technology with identity, mobility, connectivity and cyber security services, and our team of talented people, we take our clients on a journey of secure cloud transformation.

And we're with you every step of the way. Because the path to greatness isn't walked alone. We help you adopt and embrace the right tech solutions at the right time.

The result? Sustainable and secure growth that amplifies your business success.

Kocho. Become greater.
